Take heating to the Max!

- High Temperature output
- Specially designed “low-glow” incoloy technology
- Suitable for permanent outdoor installations
- Commercial grade quality and construction
- Australian designed and engineered
Stylish, energy efficient heating for both outdoor (undercover or exposed) and open indoor areas.

High Output radiant heat

The Heatstrip Max range of electric radiant heaters produces a high temperature radiant warmth that travels through the air directly to people and surfaces below – similar to the heat rays emitted by the Sun. Radiant heating is the only viable option for outdoor or tough indoor sites.

Unique low-glow heating technology

Specially designed and engineered “low-glow” heating element provides a very gentle and unobtrusive glow. There no blinding light so you can enjoy the experience. Energy is directed towards producing heat, rather than unwanted light.

Maximum heat performance – multiple applications

The high temperature output of the Heatstrip Max is perfect for exposed outdoor sites, high ceilings and hard-to-heat indoor and outdoor applications. The dual element design allows for a very compact unit, and maximum efficiency. Outdoor applications include al-fresco and dining/entertainment areas, patios, verandahs and balconies, to name a few. Indoor applications such as factories, warehouses, showrooms, workshops and workstation spot heating are ideal for the Heatstrip Max.

Suitable for permanent outdoor mounting, no protection needed.

For outdoor applications, the Heatstrip Max is suitable for both permanently exposed (eg. courtyards and patios) and undercover installations – does not need to be fully protected from the elements.

Corrosion protection

Built from corrosion resistant alloy, it is suitable for use in most applications, including difficult corrosive environments such as coastal areas.

High Strength element – virtually indestructible

The unique metallic “incoloy” element is 14mm in diameter, meaning it is vandal proof and will not shatter like glass heating elements. Provides piece of mind in both commercial and domestic situations.

Commercial grade quality – 2 years full replacement warranty

Constructed of extremely robust, commercial grade material, the Heatstrip Max is designed for long-life and durability in all conditions. It is fully supported by a 2 year replacement warranty under both residential and commercial conditions.

Multi-Purpose Mounting Options

The Heatstrip Max is supplied with flexible mounting options. The standard bracket will allow both ceiling and wall mounting at various angles, as well as suspension by chains/wires and metal rods. Optional twin, flush mount and end-to-end brackets are also available.

2 models – DIY or hard-wired

2 models are available. The THX 2400 (2400W) is supplied with a lead and plug, ideal for a DIY installations. The THX 3600 (3600W) requires hard-wiring to a 15amp power supply.

Australian designed, engineered and assembled
HEATSTRIP® Max Mounting Options

**Model**
- THX 2400
- THX 3600

**Included as Standard**
- THX 2400
- THX 3600

**Optional Accessories** (Part Numbers)
- THHAC-030
- THHAC-018

**Voltage options for all Models**
- 240V (Australia / NZ)
- 220-230V (Europe)
- 208V, 240V (USA / Canada)

**Notes**
- * Approximate running costs based on 20c/hr tariff.

**Materials of Construction**
- Anodised alloy casing and end caps with chromed grille

**Optional Controller**
- On/Off function with LED indicators
- 3 Heat Settings – High / Medium / Low
- Automatic timer – 1 / 2 / 4 hour options
- Suitable for operation of single or multiple heaters
- Must be hard-wired
- Maximum 14 Amp direct wired

The heatstrip controller (Model TT-MTM) is an optional hardwired, wall mounted switch for Heatstrip Heaters. It provides on/off function, temperature control and an automatic countdown timer.

N.B. optional controller not included as standard with Heatstrip heaters, and must be purchased separately.
